

# Shaik Mohammed Suhaib

FULL-STACK & AI ENGINEER

Chennai, Tamil Nadu • [shaiksuhaib360@gmail.com](mailto:shaiksuhaib360@gmail.com) • [github.com/RlxiV1](https://github.com/RlxiV1) • [linkedin.com/in/shaiksuhaib](https://www.linkedin.com/in/shaiksuhaib) • [shaiksuhaibdev.vercel.app](https://shaiksuhaibdev.vercel.app)

## EXPERIENCE

---

### Product & Software Development Intern Mar 2026 – Jul 2026

ForMen Digital Clinic • Remote

- Cut lab-report interpretation from minutes of manual lookup to under 2 minutes by shipping a consumer AI tool that translates 40+ men's-health biomarkers into plain-language, interactive insights — owning the flow from PRD to front-end to release.
- Architected the React front end that turns raw health metrics into non-expert-friendly screens, using client-side state management to keep 8+ interactive result views in sync.
- Authored the PRD and synthesized user feedback to scope the assessment tool and align product and engineering before the build began.

## PROJECTS

---

### ResumeScreen — AI Resume Screening Agent IIT Patna Capstone

n8n • Lovable • Gemini • Gmail API [Code](#)

- Auto-scored resumes against a job description in under 30 seconds (vs. minutes of manual first-pass review) via an end-to-end pipeline — Lovable front end → n8n webhook → Gemini agent — batch-tested on 100+ sample resumes.
- Returned a 0–100 match score, matched skills, and a hire/reject verdict as a single typed response using a JSON Schema-backed prompt, guarded by validation-and-retry for malformed model output.
- Automated per-verdict Gmail follow-ups (interview vs. rejection) and shipped a public live demo.

### InfoBlend — AI Browser Extension (Manifest V3) Firefox Add-ons • Published

JavaScript • Shadow DOM • Web APIs • Manifest V3 [Live](#) • [Code](#)

- Published a Manifest V3 extension to Firefox Add-ons (MIT-licensed, zero-dependency vanilla JS) with all UI isolated in a Shadow DOM, so page styles and the extension can't break each other.
- Shipped grounded page Q&A that answers only from on-page text and cites the exact source passage for every claim, plus one-key summaries and instant definitions.
- Engineered a privacy-first architecture: no telemetry or servers, an optional bring-your-own AI key encrypted locally (AES-GCM/PBKDF2), and context-aware translation across 17 languages.

### SubSentry — Subscription Tracker Personal Project

React • Vite • TypeScript • Supabase • Tailwind • Zod [Code](#)

- Built and deployed a subscription dashboard (React + Vite + Supabase/PostgreSQL) that tracks renewals with no bank-account linking.
- Enforced strict per-user isolation by modeling the schema with Supabase Row Level Security, securing multi-tenant data at the database layer rather than in app code.
- Hardened inputs with Zod type-safe validation and shipped a consistent UI via shadcn/ui + Tailwind CSS.

## TECHNICAL SKILLS

---

**Languages** TypeScript, JavaScript (ES6+), Python, SQL, HTML5/CSS3

**Frontend** React, Vite, Tailwind CSS, shadcn/ui, React Router, Zod

**Backend & Data** Supabase (Auth / Postgres / RLS), Data Modeling, REST API Design

**AI & Automation** LLM Prompting, Structured Outputs, JSON Schema, Agentic Workflows (n8n)

**Tools** Git & GitHub, Figma, Vercel, Manifest V3

**Product** Product Lifecycle, PRDs, User Research, JTBD, Information Architecture

## OPEN SOURCE & COMMUNITY

---

- Maintain 5 public GitHub repositories across full-stack web, browser extensions, and AI automation; ship hackathon MVPs under tight deadlines.

## EDUCATION

---

### Vel Tech High Tech Engineering College Expected May 2028

B.Tech, Information Technology • Chennai, India

### Indian Institute of Technology (IIT), Patna Apr 2025 – Oct 2025

Certification, Product Management & Agentic AI — product lifecycle, MVP scoping, and LLM-backed agentic workflows in n8n.
