Summary

Information Technology undergraduate who builds and ships full-stack and AI products end to end. Comfortable across the stack with React/TypeScript front ends, Supabase backends, and LLM-driven automation in n8n, and applies product thinking (PRDs, user research, JTBD) to turn real workflows into working software. Three projects deployed and public on GitHub.

Education

Vel Tech High Tech Engineering College

Bachelor of Technology in Information Technology

Chennai, India

June 2024 – May 2028 (Expected)

Indian Institute of Technology (IIT), Patna

Certification in Product Management & Agentic AI

Online / Hybrid

Jan 2025 – Present

- Worked through the full product lifecycle: market research, MVP scoping, and iterative launches.
- Designed agentic automation workflows in n8n backed by LLMs to reduce manual, repetitive steps.

Experience

ForMen Digital Clinic

Product and Development Intern

Remote

March 2026 – June 2026

- Built a consumer-facing AI tool from scratch that explains men's-health lab reports in plain language, owning it end to end from PRD through working product.
- Designed and implemented the interface, turning structured health metrics into clear, interactive screens for non-expert users.
- Authored the research notes and Product Requirements Documents (PRDs) that scoped the digital clinic assessment tool and guided the build.

Projects

ResumeScreen — AI Resume Screening Agent

n8n, React, TypeScript, Supabase, LLMs

IIT Patna Capstone

Live Demo | Code

- Built an end-to-end screening pipeline: a React form posts a resume PDF and job description to an n8n webhook that extracts the text and passes it to an LLM agent (OpenAI / Gemini / Groq).
- Engineered a structured-output prompt returning a 0–100 match score, confidence, matched skills, years of experience, and an interview/reject recommendation with reasoning.
- Automated follow-up by conditionally sending interview or rejection emails via Gmail based on the verdict; deployed a working live demo.

InfoBlend — AI Chrome Extension (Manifest V3)

JavaScript, Shadow DOM, Web APIs

Personal Project

Code

- Built a Manifest V3 extension with a service-worker background and content scripts, rendering its UI inside a Shadow DOM so styles never clash with the host page.
- Implemented a frequency-based extractive summarizer for full pages or selected text, plus instant definitions from a dictionary API with a Wikipedia fallback.
- Added privacy-focused ad blocking via the declarativeNetRequest API and local form auto-fill, with optional LLM (Gemini) explanations.

SubSentry — Subscription Tracker

React, Vite, TypeScript, Supabase, Tailwind, Zod

Personal Project

Live Demo | Code

- Built and deployed a subscription-tracking dashboard with React + Vite and a Supabase (PostgreSQL) backend, with no bank-account linking required.
- Enforced per-user data isolation using Supabase Row Level Security so each account can only read its own records.
- Used Zod for type-safe form validation and shadcn/ui + Tailwind CSS for a consistent component system.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5/CSS3

Frameworks & Libraries: React, Vite, Tailwind CSS, shadcn/ui, Zod, React Router

Tools & Platforms: n8n, Supabase (Auth / Postgres / RLS), Git & GitHub, Figma, Chrome Extensions (Manifest V3)

AI & Concepts: LLM prompting, structured outputs, AI agent workflows, REST APIs, full-stack development

Product: Product lifecycle, PRDs, user research, JTBD framework, information architecture

Leadership & Activities

Active Contributor – Open Source Community

2024 – Present

- Contributed documentation fixes and component improvements to open-source UI libraries.
- Maintains five public GitHub repositories spanning full-stack web, browser extensions, and AI automation.
- Joined local hackathons, collaborating in small teams to ship working MVPs under tight deadlines.
