

EXPERIENCE

Product & Software Development Intern

ForMen Digital Clinic • Remote

March 2026 – July 2026

- Engineered a consumer-facing AI tool that translates **40+ men's-health lab biomarkers** into plain-language, interactive insights, cutting typical report interpretation from ~15 minutes of manual searching to under two minutes; owned the flow end to end, from PRD through front-end build to production release.
- Architected the **React** front end that turns raw health metrics into clear, non-expert-friendly screens, using client-side state management to keep **8+ interactive result views** in sync.
- Authored product requirements and synthesized user feedback to scope the tool and align engineering and product before development began.

PROJECTS

ResumeScreen — AI Resume Screening Agent

IIT Patna Capstone

n8n

Lovable

Gemini

Gmail API

View Code

- Architected an end-to-end screening pipeline (Lovable front end → n8n webhook → Gemini agent) that auto-scores a resume against a job description, returning a typed verdict in **under 30 seconds** versus a few minutes of manual first-pass review; batch-tested on **100+ sample resumes**.
- Engineered a **JSON Schema**-backed structured-output prompt returning a 0–100 match score, matched skills, and a hire/reject verdict as a single typed response, with a validation-and-retry guard for malformed model output.
- Automated per-verdict **Gmail** follow-ups (interview vs. rejection).

InfoBlend — AI Browser Extension (Manifest V3)

Personal Project

JavaScript

Shadow DOM

Web APIs

Zero-dep

View Code

- Built a **Manifest V3** extension (service worker + content scripts) with all UI sandboxed in a **Shadow DOM** for zero style collisions across sites — zero runtime dependencies.
- Engineered a **six-source definition cascade**, **17-language translation**, and an offline **TF-IDF summarizer** — all fully usable with no API key, with optional AI (Gemini / OpenAI) as an upgrade.
- Added a local **Knowledge Vault** (500-item, CSV / Markdown export) with the API key **AES-GCM-encrypted** at rest; no page data leaves the browser.

SubSentry — Subscription Tracker

Personal Project

React

Vite

TypeScript

Supabase

Tailwind

Zod

View Code

- Built and deployed a subscription dashboard (**React + Vite + Supabase/PostgreSQL**) that tracks renewals with no bank-account linking.
- Secured multi-tenant data by modeling the schema and enforcing **Supabase Row Level Security** for strict per-user isolation at the database layer rather than in app code.
- Hardened inputs with **Zod** type-safe validation and shipped a consistent UI via shadcn/ui + Tailwind CSS.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), Python, SQL, HTML5 / CSS3
Frameworks	React, Vite, Tailwind CSS, shadcn/ui, Zod, React Router
AI & Automation	LLM Prompting, Structured Outputs, JSON Schema, Agentic Workflows (n8n), REST API Design
Tools & Platforms	Supabase (Auth / Postgres / RLS), Data Modeling, Git & GitHub, Figma, Manifest V3
Product	Product Lifecycle, PRDs, User Research, JTBD, Information Architecture

EDUCATION & CERTIFICATIONS

Vel Tech High Tech Engineering College

B.Tech, Information Technology • Chennai, India

Expected May 2028

Indian Institute of Technology (IIT), Patna

Certification, Product Management & Agentic AI — product lifecycle, MVP scoping, and LLM-backed agentic workflows in n8n.

Apr 2025 – Oct 2025

NPTEL Elite — Big Data Computing (IIT Kanpur)

SWAYAM–NPTEL elite-track course on distributed processing, Hadoop, and large-scale data systems.

Completed Oct 2025

OPEN SOURCE & COMMUNITY

- Maintain a set of public GitHub repositories across full-stack web, browser extensions, and AI automation; ship hackathon MVPs under tight deadlines.
